

PART ONE ONDAMED Theory Concept and Technology

- ONDAMED as the Center of Personalized Medicine combining other approaches including Intuition, Nutrition, Homeopathy, Bach Flowers, Unresolved Emotional Shock & Trauma linked to a variety of cancers (G.Hamer, M.D.), Epigenetics (B.Lipton, Ph.D.), Environmental Stress Reduction, Bioenergetic Field (V.Hunt, Ph.D.), Traditional Chinese Medicine, Intuitive Medicine, and more.
- Going into depth of your understanding of ONDAMED's four Modules:

Module 1 learn how to best utilize this frequency list tone, color, and organ correlations

Module 2 Review all of the 174 different therapy programs; their creation, background, and purpose

Module 3 This module will help you identify the micro-organism related frequency that is most significant for your patient, rather than let the symptom direct your microbial frequency choice.

Module 4 The use of nutritionally relevant programs, enhancing assimilation of vitamins, enzymes, and minerals

PART TWO Hands-On Training

- Using ONDAMED for acute injuries, pre- and post-surgically
- Review of Standard Protocol for patients suffering from chronic disease
- The Pulse Feedback method
- The ONDAMED Visualization Software will be utilized during the entire training
- Identify the most significant programs in Module 2
- **Learn about our new Premium Upgrade and its easy navigation between modules and preloaded Treatment Protocols on automatic run-through**
- **Use and observe our new accessory, the fingertip sensor measuring heart rate and SpO. Besides the visual physiological monitoring functionality for the patient and practitioner on the upper and lower displays, the upgraded device also offers an audio parameter**
- Scan the body to find reaction areas, followed by identifying the patient's Main Foci regions
- Select the two most relevant frequencies from Module 1 and correlate with organs and organ systems, then apply to Main Foci
- Scan through Module 3's frequency list and choose the prime frequency, giving us the information which micro-organism including parasite, virus, bacteria, fungus, cavity, and enamels, is in the forefront and applying its focused frequency on Main Foci
- Use programs from Module 4, assessing vitamins, enzymes or minerals which potentially are not properly assimilated; this stimulation will enhance the cellular metabolism of the identified substance
- Expand your diagnostic perspective: Observation and recognition of our patient patterns as identified with the four modules and the Main Foci. In addition, we will correlate emotional relevance connected with identified programs, meridians (TCM) related to Main Foci. We will review such patterns on a flip chart and together in the group unravel the unknown historic health path that led the patient to her/his existing symptoms
- Self-Treatment

NEW!

NEW!

- Charging water with ONDAMED frequencies for patient's home use
- Use supplemental methods such as a special German homeopathic kit and Bach Flower remedies
- Learn about testing of interactions with nutrition, heavy metals and animals/insects helping to reduce patients' inflammatory states followed by a unique desensitizing method with our new invention RebaPad

PART THREE ONDAMED Theory, Concept and Technology

- 10-minute scan as part of patient intake for physician's diagnostic and treatment plan use
- Review frequency of sessions according to the three patient phases:
 1. Stabilization
 2. Building to an improved state of health & wellness
 3. Maintaining the state of wellness
- Billing
- Educating your patients and colleagues with select marketing concepts.

PART FOUR Personal Experience

Every participant will undergo a 10-minute assessment using all four modules. This will help everyone understand their own personal health patterns by reviewing the findings of frequencies, programs, reaction areas and the Main Foci. Experiencing this method on oneself will strengthen the understanding of this very valuable approach and help direct meaningful communication with patients while receiving a more complete picture of the patient's physiological, mental, and emotional health history and patterns over their entire lifespan.
